

## Meeting minutes International exchange CSA-sofwares

26.8.20

### Attendees

Thibaud, Moritz, David, Flo

Excused: Michael

### Preferred communication channels

- Moritz: Mail for long, complicated Discussions
- Flo: We could use the urgenci mailing list
- David: prefers Mattermost
- Thibaud: prefers Mail

**Result:** We will use the urgenci mailinglist

**TODO** send the mailing list link to everyone

### Strategy of the german CSA-network

David thinks that a one-size-fits-all-software can't be done.

*(idea)*

David / Thibaud: Onbarding and support are the most tedious work for both of them. Development ressources are no problem. The Network could invest its ressources best by providing support for Solawis that want to use a program. So the network would coussel the CSAs on which software fits best for them rather than to provide one single software for alle of them.

The Network could support all programmers by doing work like getting documentation and taking over the contact to Solawis that want to use one of the programs (incl. onboarding). The latter is most of the work.

*(idea)*

David: The network could invest in missing software pieces that can be included into the other programs by means of microservices.

#### **Result**

David and Thibaud: Shared data structures are not an option. It would be a pain for everybody with no clear advantages. What would be the purpose?

22.09.20 • Seite 1 von 2

## Juntagrigo

David showed how to set up a new Juntagrigo instance with a few clicks within a few minutes on a shared server.

### **TODO**

Kartoffelkombinat will provide a list of features that turned out to be needed for a german CSA (accounting and so on). Because of the size of Kartoffelkombinat this would be a good example.

## Misc

- David tells about his experiences how hard it is to communicate with some of the CSAs. The installation of the program for the CSA fails because of little, unimportant things, e.g. missing features that aren't really important.
